

Flame Test Video Compilation from January 23, 2014 AMXDmax testing.

Link to watch complete video

http://omnimedicalsys.com/videos/firetest/BurnComp_Small.mp4

This video snap shot shows a comparison of the currently used Piddle Pack with Gel Powder, the currently used Piddle Pack with Sponge, the currently used Travel John all bursting into flame and remaining flaming with molten dripping plastic after removal from flame. Comparing them to the AMXDmax Collection Chamber (Bag), which does not burn while in the flame or after removing it from the flame.

The individual run times displayed on each screen is the time each bag was completely removed from the flame.

Watch the video to see that both piddle packs and the Travel john burst into flame well before the 3.5 second no burn test requirement. All remained burning, even after removal from flame. All three of these do not pass the Safe To Fly Flame Test Requirements. In addition the Piddle Pack produces toxic life threatening PVC fumes.

The AMXDmax does not burn and passes the Safe to Fly Flame Test Requirements.
